

PRELIMINARY AMENDMENT

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A pad for use in protecting the trochanteric region of the body comprises at least two separate layers, a substantially rigid layer (1), and a layer of dense, closed-cell resilient foam material (2); wherein the substantially rigid layer (1) includes a projecting boss (3) which, in use, is located in the region of the greater trochanter to increase the spacing between the outside of the rigid layer (1) and the greater trochanter; and wherein the layer of closed-cell foam material (2) extends over a greater area than the substantially rigid layer (1) so that the periphery of the substantially rigid layer (1) lies entirely within the periphery of the foam layer (2).

2. (Currently Amended) A pad according to claim 1, in which the side walls of the projecting boss (3) are substantially frusto-conical so that the base of the boss (3) extends over a greater area than the top (11).

3. (Currently Amended) A pad according to claim 2, in which the side walls of the boss (3) are flared outwards at the base to merge into the remainder of the substantially rigid layer (1) and join the top of the boss (11) at a rounded corner.

4. (Currently Amended) A pad according to ~~any one of the preceding claims~~ claim 1, in which the top of the boss (3) is thinner than the remainder of the rigid layer (1) with the

PRELIMINARY AMENDMENT

sidewall of the boss having a thickness corresponding to that of the remainder of the substantially rigid layer (1) at its base and tapering to that of the top of the boss (1) at its top.

5. (Currently Amended) A pad according to ~~any of the preceding claims~~ claim 1, in which the pad includes a third layer (10) of less dense foam material remote from the substantially rigid layer.

6. (Currently Amended) A pad according to claim 5, in which the third layer (10) has a greater extent than the layer of closed-cell foam (2) and that the periphery of the layer of closed-cell foam (2) lies wholly within the periphery of the third layer (10).

7. (Currently Amended) A pad according to ~~any one of the preceding claims~~ claim 1, in which apertures (7) are provided through at least the rigid (1) and closed cell foam (2) layers of a pad to provide for ventilation.

8. (Currently Amended) A protection device for covering the trochanteric region of the body includes two protective pads (22) in accordance with ~~any one of the preceding claims~~ claim 1, connected to a support (20,21,23,27) so that, in use, the pads cover the trochanteric regions of the user of the protection device.

9. (Original) A protection device according to claim 8, in which the support has the form of a garment which covers the trochanteric area.

10. (Currently Amended) A protection device according to claim 9, in which the garment has the form of an undergarment (23,27) having a waistband (24,28) and being arranged, in use, to extend down the thighs of the wearer.

Atty. Docket No. CQ10133
PATENT APPLICATION

PRELIMINARY AMENDMENT

11. (Currently Amended) A protective device according to claim 9 or 10, in which the garment (25,27) includes pockets (30) which hold the pads (22).
